

STANDARD SPECIFICATIONS

ALUMINUM FLASHING

DRIP EDGE

Use:

Flashing installed at roof line to protect sheathing from water penetration.

Feature:

4' pieces made from .017 aluminum. 1.5"x1.5", made in 4' or 10' sections. Features a lap notch specially designed for a perfect fit to keep water from seeping through to the fascia and roof. The weep stop protects roof sheathing from water penetration during driving rains. Available in 30 painted aluminum colors, 16 oz. solid copper and 26 ga. galvalume plus.
